Work Experience

RhythmX AI

December 2024 – Present

AI Solutions Engineer

Palo Alto, CA

- Served as technical advisor to senior leadership – architecting AI platform solutions, presenting LLM performance and cost metrics, and translating complex model behaviour into business decisions that cut executive decision cycles by 50%
- Built and deployed production GenAI recommendation agents on Azure, expanding clinical AI coverage from 4 to 200+ medical conditions at 98%+ accuracy; authored a Neo4j GraphRAG PRD advancing to leadership review
- Built LLM evaluation and AI observability frameworks – LLM-as-a-judge, human-in-the-loop clinical validation, precision/recall benchmarking in a HIPAA-compliant environment
- Developed and evangelised AI tooling and best practices adopted company-wide across QA, infra, performance, and clinical teams; ran technical enablement sessions translating AI concepts for audiences of varying technical depth
- Optimised inference platform via Temporal orchestration across 200,000+ Batch API requests and MongoDB query profiling, reducing API costs by \$4,000 weekly and end-to-end latency by 50% in high-concurrency production workflows

Boehringer Ingelheim

July 2023 – December 2023

Data Scientist Co-op

Ridgefield, CT

- Built a GraphRAG knowledge extraction platform using Stardog knowledge graphs and LLMs, automating entity extraction and relationship modelling across 1,000+ supply chain PDFs to power executive reporting and transparency workflows
- Delivered real-time GTM dashboards for 10+ drug launches on AWS CDK and Databricks, integrating ML model outputs into commercial decision workflows; ran enablement sessions to drive adoption across non-technical business stakeholders
- Created 25+ Python and PySpark tutorial notebooks standardising AI and data development practices, accelerating enterprise-wide Databricks onboarding across teams of varying technical backgrounds

Adqvest Capital Pvt. Ltd.

April 2020 – June 2022

Data & Software Engineer

Chennai, India

- Architected NLP sentiment pipelines using SpaCy and PageRank graph algorithms for automated entity analysis and report generation, directly contributing to retention of 5+ institutional clients worth \$2M+ AUM
- Deployed 100+ Python scrapers and AWS RDS infrastructure processing gigabytes of alternative financial data, powering real-time market intelligence for institutional clients

Projects

SupplyChainInsights – GraphRAG Knowledge Graph Platform ([GitHub](#) & [Medium](#)) May 2024 – August 2024

Python, Neo4j, Cypher, LangChain, Hugging Face Transformers, OpenAI, RAGAS, Streamlit

- Featured in Neo4j's *This Week in Neo4j* newsletter** – built a graph intelligence platform on Neo4j modelling connected relationships across 1,000+ ARV and HIV drug supply chain entities; designed Cypher-driven traversal queries and a conversational analytics interface enabling real-time graph exploration
- Fine-tuned Llama 3 and Phi-3 for natural language to Cypher query conversion; evaluated using RAGAS (Faithfulness, Answer Relevancy) and applied Graph Data Science similarity algorithms with OpenAI vector search to surface entity-level supply chain recommendations

Parallel Image Captioning with PyTorch DDP ([GitHub](#))

January – May 2024

Python, PyTorch, CUDA, Multi-GPU

- Implemented distributed data-parallel training with PyTorch DDP achieving 3x faster multi-GPU training; built encoder-decoder image captioning architecture with mixed precision training and parallel data loading pipelines

Education

Northeastern University

August 2024

Master of Science in Information Systems (Data Science)

Boston, MA

SRM Institute of Science and Technology

May 2019

Bachelor of Technology in Mechanical Engineering

Tamil Nadu, India

Skills

Graph & AI: Neo4j, Cypher, Graph Data Science, GraphRAG, RAG (Vector & Graph), Knowledge Graphs, Stardog, LLM Evaluation, Prompt Engineering, LangChain, OpenAI, Hugging Face

Programming & ML: Python (Expert), PyTorch, TensorFlow, Scikit-Learn, SQL, JavaScript, PySpark

Cloud & Data Platforms: Azure (AKS, App Services), AWS (CDK, SageMaker, RDS), GCP, Databricks, Snowflake

Databases: Neo4j, PostgreSQL, MongoDB, ChromaDB (Vector), Stardog

DevOps & Tools: CI/CD, Docker, Kubernetes, Git, RESTful APIs, Airflow, Streamlit, Tableau, PowerBI
